DETAILED ACTION

Response To Restriction

Applicant's election of claims 1-8 and cancellation of claims 9-13 in Paper No. 7 is hereby acknowledged.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Givargizov et al..

Regarding claims 1-4 and 8, referencing Figures 1-7, Givargizov et al. discloses a field display device provided with an array of nanotips (1) formed from an array of defects in a crystalline material (7) (i.e. monocrystalline silicon substrate); and a transparent plate (3) positioned over the array of nanotips, the transparent plate to produce light when receiving electron emissions from the nanotips. Lastly, Givargizov et al. further discloses providing that the nanotips be coated with a low work function material of diamond. (Column 3, line 40 – Column 5, line 38.)

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 5-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Givargizov et al..

Regarding claims 5-7, Givargizov et al. teaches all the claimed invention except for having the semiconductor material be Gallium Nitride and coating the nanotips with metal. Although Givargizov et al. does not teach the exact type of the semiconductor material or the exact coating of the nanotips as that claimed by Applicant, these differences are considered obvious design choices and are not patentable unless unobvious or unexpected results are obtained from these changes. It appears that these changes produce no functional differences and therefore would have been obvious. Note *In re Leshin*, 125 USPQ 416.

Related Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Xie et al., Marcus et al., Yazawa et al., Gilton et al. and Jones each disclose field emitter devices.
